SYSTEM AND METHOD FOR PROVIDING POST HOC
ACCESS TO LEGACY APPLICATIONS AND DATA

ABSTRACT

A method and architecture having components for performing a

5   method comprising the steps of: forming a simple bi-directional

communication link between each of the clients and a server; and,

transmitting along the communication link at least one of two

kinds of messages comprising a first message which is a

synchronous query/response, and a second message which is an

10   asynchronous subscription based event notification, to allow

arbitrary data structures to be rendered into a standard

communication format.
